

ENVIRONMENTAL CONSULTING

Evergreen can help you with all your environmental needs!

Evergreen Engineering can help your mill determine the best strategy for complying with your environmental obligations. Every site is unique and offers different opportunities to comply with Federal and State environmental regulations.

Evergreen offers consulting services to evaluate your current site and assist you in complying with environmental regulations. Our approach draws on our deep well of process experience to understand operational variables and our experience in testing, modeling, and analysis.

Evergreen will visit your facility, develop and/or confirm emission inventory estimates, perform a status check of your situation relative to environmental compliance, evaluate the potential benefits of the various compliance options, and recommend a path forward.

If additional emission control technology is required, Evergreen Engineering is an industry leader in providing both detailed engineering for integrating the new equipment into existing mills, and the associated environmental permitting services.

Evergreen can help you with:

- Air emission permits
- Environmental permits for greenfield plants
- Equipment upgrades and selection
- Process water control and permitting
- Solid waste disposal
- Wastewater pH control
